

YINKA THEOPHILUS ADEBIMPE

Data Analyst | Junior Data Scientist

Doncaster, UK | +44 7879 572105 | adebimpey@gmail.com | LinkedIn: [linkedin.com/in/yinka-adebimpe](https://www.linkedin.com/in/yinka-adebimpe)

Portfolio: 3 end-to-end data science projects · GitHub: github.com/YinkaAdebimpe

Right to work in the UK: Yes - Dependant visa with full work rights, no sponsorship required

PROFESSIONAL SUMMARY

Data analyst with a Diploma in Data Analytics (Pitman Training) and a three-engagement consulting portfolio covering customer churn prediction (ROC-AUC 0.81), customer lifetime value modelling (£3.33M projected portfolio CLV), and insurance claims severity prediction (MAE £1,937). Strong foundation in Python, SQL, PostgreSQL, survival analysis, and machine learning. Customer-facing experience in the UK gives practical understanding of the business problems that analytics is meant to solve.

TECHNICAL SKILLS

Languages: Python, SQL, R

Data & Libraries: pandas, numpy, scikit-learn, XGBoost, SQLAlchemy

Databases: PostgreSQL, MySQL

Machine Learning: Classification, regression, survival analysis (Kaplan-Meier, Cox PH), feature engineering, model evaluation, hyperparameter tuning

Visualisation: matplotlib, seaborn, Power BI, Tableau

Tools: Git, GitHub, JupyterLab, VS Code, Salesforce, TCAS

PORTFOLIO PROJECTS

GuardianShield Insurance — Three-Engagement Consulting Portfolio github.com/YinkaAdebimpe

A series of three end-to-end data science engagements for a fictional UK insurer, each with a reproducible data pipeline, PostgreSQL backend, notebooks, trained models, and business-facing reports.

1. Customer Renewal Prediction (Classification)

- Built a binary classifier predicting which customers would lapse at their next renewal
- Diagnosed an initial weak model (ROC-AUC 0.70) and identified missing behavioural features
- Added four new features (missed payments, payment method changes, days since last contact, prior renewal count) — lifted ROC-AUC to 0.81
- Benchmarked Logistic Regression, Decision Tree, Random Forest, and XGBoost

2. Customer Lifetime Value Modelling (Survival Analysis)

- Built a 12-month CLV model using Kaplan-Meier estimation and Cox Proportional Hazards
- Achieved concordance 0.77 and identified price-sensitive customers as 16× more likely to churn
- Projected £3.33M total 12-month portfolio value across 5,000 customers
- Evaluated BG/NBD and documented it as a negative result (model assumptions did not fit contractual renewal data)

3. Claims Severity Prediction (Regression)

- Built a regression model predicting insurance claim cost (£)
- Compared raw vs log-transformed targets across four model families
- Achieved MAE £1,937 with Random Forest; demonstrated the log transform rescues Linear Regression (RMSLE 2.96 → 0.50)

Tech: Python, PostgreSQL, scikit-learn, XGBoost, lifelines, pandas

PROFESSIONAL EXPERIENCE

Warehouse Associate

Amazon, Doncaster, UK | Oct 2023 – Present

- Worked within a metrics-driven operation where every process is benchmarked against KPIs — practical exposure to how data drives operational decisions at scale
- Used Amazon Career Choice programme to complete a Diploma in Data Analytics (Pitman Training) alongside the role

Sales & Renewals Advisor

Homeprotect Insurance (via Concentrix), Sheffield, UK | Jan 2025 – Jul 2026

- Handled inbound and outbound renewal conversations for home insurance policyholders
- Analysed customer behaviour to identify retention opportunities and reduce churn
- Managed customer data in Salesforce, TCAS, and Workday within an FCA/GDPR-regulated environment

Support Worker

The Hesley Group, Doncaster, UK | Nov 2022 – Sep 2023

- Supported individuals with complex needs in a regulated care setting
- Developed strong communication and observational skills — transferable to user research and customer analytics

EDUCATION

Diploma in Data Analytics

Pitman Training | 2024 – 2025

Covered: SQL, Python, R, Tableau, Advanced Excel, Statistics, Project Management for Data Analysts, Fundamentals of AI

Expert Data Scientist Course

Stackwizr London | 2022 – 2024

Covered: Power BI, SQL, Machine Learning with Python, Deep Learning (TensorFlow/Keras), Feature Engineering, Natural Language Processing

BSc Mathematical Sciences (Second Class Upper)

University of Agriculture, Abeokuta | 2006

Relevant modules: Linear Algebra, Calculus, Probability Theory, Statistics, Numerical Analysis
